**Re: McFletch Limited**

McFletch Limited has recently carried out demolition works and asbestos removal works on behalf of Lagan Construction at our site – Suffolk Energy from Waste.

- The value of the project was in excess of £125,000.00. The project was awarded to McFletch Limited following a competitive procurement process.

The project involved the demolition of 9no building structures and removal of reportable and non-reportable asbestos from the buildings.

A portion of the works required the demolition of a structure adjacent to a live railway line, which was completed safely and proficiently.

The project was delivered ahead of the required timescales and the site was left at completion tidy and in compliance with specification.

McFletch demonstrated their experience in this discipline. Furthermore they have the capabilities in house to provide all the necessary plant and equipment required to carry out a successful project.

Yours Sincerely

Eamon Curran  
Contracts Manager
